

WATER PROPAGATION

AT THE HORTICULT PROPAGATION STATION

Water propagation is a fascinating and visually engaging method of growing new plants. It allows for easy observation & monitoring of the cutting's health & root development.

1

*Pick your container or 'Sprout Spout' -
You have the choice of a 1, 2, or 5 plant set up.*

2

*Choose your plant(s) -
Select a plant for each container you chose.
We offer three distinct plant types, each
featuring a variety of options to choose from.*

Jungle Succulents

*Rhipsalis
Hoya*

Tropical Houseplants

*Philodendron
Pothos*

Herbs

*Lavender
Rosemary*

3

*Take a cutting from the mother plant of the
variety you have chosen.
Sterilize your scissors with an alcohol pad.
Make a cut just below a node, ensuring each
piece has at least 1 node & 1 or 2 leaves (if
applicable).*

4

*Put together Propagation Package.
Gather the rest of the materials you need to
finish the water propagation process.*

- Water Bottle*
- Sprout Spout*
- Instruction Card*
- Plant Cutting(s)*
